

OUR INTELLIGENCE ADVANTAGE

Experian data is the brain. Every tool is the muscle.

How Southwest Recovery Services runs a data-first recovery architecture — where Experian's intelligence drives every decision, on every account, in real time.

Most collection agencies buy tools and hope they work. Southwest Recovery Services built something fundamentally different: a data-first architecture in which Experian's intelligence layer drives every decision made by every tool in the stack. Before a single contact is made on any account, we run each debtor through Experian's full data infrastructure — the same foundation the world's largest lenders, financial institutions, and government agencies rely on to make credit decisions. The result is not an incremental improvement in recovery. It is a categorically different outcome for our clients.

Executive summary

The single most expensive habit in collections is blind outreach — treating every account the same, calling in balance-and-age order, and contacting people at the wrong time on the wrong channel. That model wastes money on accounts that will never pay, misses accounts that would have paid with a different approach, and courts TCPA liability by dialing reassigned numbers. Southwest Recovery Services replaced it with an Experian-driven architecture: 245 million consumers profiled, 60+ industry-specific scoring models, daily life-event monitoring, real-time phone validation, and continuous skip tracing — all flowing automatically into every platform we run, from the first email to the last legal action. Experian client data shows this data-first approach accelerates recovery rates by roughly 15–20%. This paper explains exactly how it works.

1. The problem with most agencies

The majority of collection agencies operate on what Experian calls a "dialing for dollars" model. They receive an account file, assign it to a queue, and start calling. Every debtor is treated roughly the same way — the same call cadence, the same letter template, the same email, the same escalation path — regardless of who is most likely to pay, who just became able to, or who cannot pay at all. It is an approach built on volume and instinct rather than intelligence.

That habit is expensive on three fronts at once. It burns collector hours on accounts with zero recovery potential — every minute spent on an uncollectable account is a minute not spent on one that would have paid. It misses accounts that would have resolved with a different channel, a different offer, or better timing. And it creates real compliance exposure: dialing a number that has been reassigned to a new consumer is a Telephone Consumer

Protection Act (TCPA) violation, and a single case can cost more than an entire portfolio returns. We chose a different architecture entirely — one where the data decides.

2. The Experian data universe

Experian operates the largest and most comprehensive consumer data asset in the United States. This is not a third-party data reseller and it is not a static file purchased once and left to age — it is Experian’s own proprietary database, built over decades and updated continuously. When we place your accounts against it, we are enriching every debtor record with the same intelligence used to underwrite credit at national scale.

THE EXPERIAN DATA FOUNDATION	SCALE
Credit-active consumers profiled in the U.S.	245M+
U.S. households with comprehensive contact data	140M+
Businesses tracked for commercial collection	19M+
Data updates made every single month	1.3 billion
Local exchange carriers for real-time phone validation	5,000+
Industry-specific debt-recovery scoring models	60+
Skip-tracing data refresh cadence	24/7 — not monthly like competitors
Average lift in right-party contact using TrueTrace™	~10%

The point of this scale is not the numbers themselves — it is what they make possible. With a data foundation this deep and this current, we do not have to guess who to contact, how to reach them, or when. We already know, before the work begins.

3. The scoring and validation layer

The single most expensive mistake in collections is working the wrong accounts first. Experian’s scoring models eliminate that waste by ranking every account before a collector touches it, so the highest-value work is always at the top of the queue — not buried behind large but uncollectable balances. Alongside scoring, Experian’s validation and monitoring products make sure every contact we attempt is to the right person, on a legal number, at the right moment.

EXPERIAN PRODUCT	WHAT IT DOES ON EVERY ACCOUNT
PriorityScore for Collections SM	60+ industry-specific models rank each account by likelihood to pay or expected dollar recovery — applied on day one, so your highest-value accounts are worked first.
RecoveryScore 2.0	Behavior-based scoring built for charged-off accounts; rank-orders by collectability so our best collectors work the highest-yield accounts, not simply the largest balances.
Collection Advantage SM	One integrated view combining credit scoring, contact data, skip tracing, and attributes such as credit availability, recent inquiries, and newly opened trades.

EXPERIAN PRODUCT	WHAT IT DOES ON EVERY ACCOUNT
Phone Number ID™ + Contact Monitor™	Real-time validation across 5,000+ carriers confirms who owns a number today, cell vs. landline, and whether it has been reassigned — stopping TCPA violations before the dial.
Collection TriggersSM	Daily monitoring of every account for life events that signal a change in ability to pay — the difference between chasing someone who can't pay and reaching someone who just became able to.

Collection Triggers deserve special mention, because timing is where most recovery is won or lost. Experian watches every account in your portfolio, every day, for the events that change a debtor's capacity: a new job, a new credit inquiry or trade, a newly opened credit line, a confirmed new address or phone, a financial-status improvement, or a public record. The moment a trigger fires, our platform responds automatically — re-prioritizing the account and activating the right outreach without waiting for a human to notice. Most agencies never find out the debtor could suddenly pay. We are contacting them that day.

4. How Experian drives every tool

This is the architectural difference that separates us from other agencies. Experian's data and scoring outputs are not a report a human reads and then acts on — they are live inputs that flow directly into every platform we run, automatically determining what happens next on each account.

TCN predictive dialer

Experian tells the dialer who to call, when, and on what number. Phone Number ID validates every number before TCN dials; PriorityScore decides which accounts reach the top of the queue; Contact Monitor updates the suppression list continuously to prevent illegal calls to reassigned numbers. Every call TCN places is to a verified, prioritized, legally safe contact — maximizing right-party contact and protecting compliance at the same time.

Skit.ai AI voice + SMS

Experian tells Skit.ai which channel to use, what tone to take, and what to offer. The debtor's financial profile determines whether the conversation leads with a settlement, a payment plan, or a self-cure portal link; modeled income informs realistic payment amounts; phone-type data decides voice or SMS first; and Collection Triggers signal exactly when to re-engage a dormant account. Every interaction is calibrated to the individual rather than blasted to everyone.

Amazon SES API — email at scale

Experian tells the email engine what to say, to whom, and when. Financial profile, payment history, income estimates, and PriorityScore feed the content logic — urgency, empathy, a settlement offer, or a self-cure link — while TrueTrace supplies the confirmed address that ensures delivery. The difference is one million personalized, contextually relevant emails an hour instead of one million generic ones most recipients ignore.

Aktos AI platform

Experian is the decision layer that tells Aktos what strategy to assign to every account. PriorityScore, RecoveryScore 2.0, financial profile, and Collection Triggers feed Aktos's workflow engine, which automatically routes each account to the correct segment — self-cure, AI outreach, or live agent — sets the escalation path, and updates the strategy in real time when Experian signals a change. That is behavioral, capacity-aware segmentation rather than the primitive balance-and-age sorting most platforms rely on.

CollectWise AI legal engine

Experian tells CollectWise which accounts are worth litigating and which are not. Asset data, property records, employment history, and RecoveryScore 2.0 determine whether a judgment could actually be enforced, so legal research and litigation prep only launch where recovery is realistic — directing legal spend at enforceable accounts instead of wasting it on judgments that can never be collected.

SW Recovery client portal

Experian data enriches every account record you see in real time. Instead of a name, a balance, and a contact history, your portal shows a continuously updated intelligence dossier on each debtor — confirmed contact information, TrueTrace status changes, trigger notifications, and scoring shifts — so you always know not just what we have done, but why, and what the data says we should do next.

5. The intelligence cascade — from placement to recovered dollars

Every account you place runs the same disciplined chain of intelligence. **First, Experian enrichment:** on placement, we immediately pull credit profile, alternative data, rental-payment history, modeled income, collateral data, and skip-trace contact information, consolidating it into one unified debtor profile. **Second, scoring and prioritization:** PriorityScore and RecoveryScore 2.0 rank the account against the rest of your portfolio — high-propensity accounts rise, uncollectable ones are identified early, legal-viable accounts are flagged, and hardship accounts are separated for sensitive treatment.

Third, strategy assignment in Aktos: the scoring outputs flow straight into Aktos, which assigns the correct path — self-cure, AI-driven omnichannel, or live-agent escalation — with no human making that call; the data makes it.

Fourth, targeted outreach: TCN dials only validated, TCPA-safe numbers, Skit.ai deploys the calibrated channel and message, and the SES API fires personalized email built from Experian data rather than templates. **Fifth, continuous monitoring:** while outreach runs, Collection Triggers watch every account daily and update the strategy automatically the moment anything changes.

Sixth, legal intelligence: unresolved accounts are evaluated by CollectWise against Experian asset and property data before any legal action, so only enforceable accounts proceed.

The result is recovered dollars — more accounts resolved, faster, at lower cost, with full compliance, because every decision was made with data rather than instinct.

6. What Experian-driven intelligence delivers

The payoff of running intelligence through every layer of the process shows up in measurable client outcomes — more recovery, less waste, and compliance protected by design rather than by after-the-fact audit.

OUTCOME	WHAT IT MEANS FOR YOU
~15–20% acceleration in recovery rates	Faster resolution and cash flow, measured against traditional collection methods (Experian client data).
~10% lift in right-party contact	More conversations with the people who can actually resolve the account, via TrueTrace™.
60+ scoring models · daily trigger monitoring	Every account ranked correctly, and never a missed moment when a debtor becomes able to pay.
Phone validated before every dial	TCPA exposure addressed at the source — ownership and reassignment checked in real time, not audited later.
Legal spend directed at enforceable accounts	Litigation resources aimed only where Experian data confirms a judgment could be collected.

How Southwest Recovery Services puts it to work for you

Place an account with most agencies and you get a team making educated guesses with outdated tools. Place it with Southwest Recovery Services and that same account is driven by the most comprehensive consumer data infrastructure in the country — automatically, from the first email to the last legal action. We do not work harder than other agencies; we work smarter, because every move is backed by the best data in the industry. That is why our clients recover more, spend less to recover it, and do not have to worry about a compliance violation destroying a case. Data-first collection is not a feature of what we do — it is the foundation of everything we do.

About Southwest Recovery Services

Southwest Recovery Services is a commercial, B2B-focused collection agency that has recovered business receivables on pure contingency since 2004, working unpaid invoices for finance teams across the country — from subscription and SaaS balances to trade, freight, contracting, healthcare and professional-services receivables. Over two decades we have placed more than \$975M in receivables, recovered over \$76M for clients, and worked 800,000+ accounts, with nationwide reach across all 50 states from 12 offices in 7 states. The model is simple: pure contingency, with no upfront fee, no retainer and no minimum — no recovery, no fee — backed by a documented, Reg F-compliant process, ACA International membership, and a clean compliance record since 2004.

See what data-first recovery does for your portfolio.

Send a sample placement file and we will show you how Experian-driven intelligence prioritizes, contacts, and recovers your accounts — on pure contingency, with no upfront fee.
