

AI-POWERED COLLECTIONS

Compliant, compassionate, and automated — recovery run on Aktos.

How Southwest Recovery Services uses the Aktos AI platform to recover more, faster, with compliance built into every step — not bolted on afterward.

Most collection agencies buy software and hope it helps. Southwest Recovery Services built its operation around a next-generation, AI-driven collections platform — Aktos — where automation, omnichannel outreach, and compliance are one integrated system rather than three disconnected tools. The result is a boutique, people-first agency that delivers enterprise-grade speed, consistency, and auditability: faster cash for clients and a cleaner, more respectful experience for the consumers we contact.

Executive summary

Legacy collection runs on a “dialing for dollars” model — the same call cadence, the same letter, the same escalation for every account — which wastes effort on accounts that will never pay, misses accounts that would have paid with a different approach, and courts compliance risk by contacting people the wrong way at the wrong time. Aktos replaces that with AI workflow automation, omnichannel contact (voice, SMS, and email), dynamic scoring and segmentation, and compliance guardrails (FDCPA, Regulation F, TCPA) enforced inside the workflow. In SWRS’s deployment this data-first, automation-first model is designed to shorten days-sales-outstanding, reduce consumer disputes, and accelerate the acknowledgment and validation of new placements — all while protecting the client’s brand. This paper explains how it works.

1. Why automation — and why it has to be intelligent

The economics of collections are unforgiving. Every hour a collector spends on an uncollectable account is an hour not spent on one that would have paid, and every contact made at the wrong time, on the wrong channel, or to a reassigned number erodes both recovery and compliance. Manual, one-size-fits-all collection cannot solve this at scale — there are simply too many accounts and too many variables for a queue sorted by balance and age to get right.

Aktos exists to close that gap. It is a next-generation, AI-driven collections platform designed for compliance, scalability, and automation — the operating layer that decides, for every account, what happens next: which segment it belongs to, which channel and message fit the situation, when to reach out, and when to escalate. Automation removes the repetitive work; intelligence makes sure the automated work is the right work.

2. The Aktos platform

Aktos combines the capabilities that most agencies stitch together from separate vendors — or never assemble at all — into a single workflow engine.

CAPABILITY	WHAT IT DOES
AI workflow automation	Eliminates repetitive tasks and accelerates recoveries by automating intake, segmentation, outreach, and escalation end to end.
Omnichannel contact engine	Blends email, SMS, and voice into a coordinated sequence — the right channel for each consumer rather than a one-channel blast.
Dynamic scoring & segmentation	Predicts payment likelihood and routes each account to the strategy most likely to resolve it.
Compliance guardrails	FDCPA, Regulation F, and TCPA rules enforced directly inside outreach automation — not audited after the fact.
Real-time dashboards	Performance monitoring, segmentation, and analytics across every portfolio, visible on demand.
API-first architecture	Seamless integration into client systems, portals, and billing platforms via secure API or SFTP.

3. How SWRS deploys Aktos across the A/R lifecycle

Aktos is not a bolt-on we run at one stage — it coordinates every phase of recovery. **Intake is immediate:** accounts are placed by secure SFTP or API and begin working without the data lag that costs early-stage recovery. **Scoring happens up front:** each account is scored on placement so the platform can determine the most effective outreach path before the first contact. **Outreach is omnichannel and coordinated:** voice, SMS, and email are sequenced through the Aktos workflow engine rather than fired independently, and legal-track accounts are handed to CollectWise for AI-assisted evaluation. **Reporting is transparent:** clients see status, segmentation, and performance for every portfolio in real time. And throughout, **consumer contact is empathy-first** — data-driven scripting that leads with listening and solutions instead of pressure, because that is both the right way to treat people and the way that actually gets accounts resolved.

4. Compliance built into the workflow

The most expensive collection mistakes are compliance mistakes. A single TCPA violation for dialing a reassigned number, an FDCPA or Regulation F misstep on a consumer account, or an inaccurate credit-reporting furnish can cost more than a portfolio returns — and can damage the client's reputation in the process. Aktos addresses this at the source by enforcing the rules inside the automation itself: contact-frequency and consent limits, channel and timing constraints, and validated contact data govern what outreach is allowed before it is ever sent.

The consequence is a process that stays professional and precisely compliant — no threats, no harassment, no misrepresentation — which protects the consumer, protects the client's brand, and protects the client from the liability that sloppy collections create.

5. What the Aktos model delivers

Bringing automation, omnichannel outreach, and compliance into one intelligent system produces measurable operating gains:

OUTCOME	WHAT IT MEANS FOR YOU
Shorter days-sales-outstanding	Automated early-stage intervention resolves accounts sooner — SWRS targets a 15–25 day reduction versus manual collection.
Fewer consumer disputes	Calibrated, compliant, data-driven contact is designed to cut disputes materially below industry norms.
Faster placement turnaround	API/SFTP intake and automated acknowledgment speed validation of new placements by roughly half.
Clean compliance record	Guardrails enforced before outreach keep FDCPA / Reg F / TCPA exposure low — and keep client brands out of complaint headlines.
Transparency by default	Real-time dashboards on every portfolio — you always see what is happening and why.

How Southwest Recovery Services puts it to work for you

In an industry defined by regulation and perception, SWRS uses Aktos to prove that automation and empathy can coexist — a modern agency that is both compliant and compassionate while driving superior results. You get the efficiency of an AI-driven platform with the judgment of an operator who has done the work by hand: the reason clients recover more, spend less to recover it, and never worry that how a debt was pursued will harm their brand.

About Southwest Recovery Services

Southwest Recovery Services is a commercial, B2B-focused collection agency that has recovered business receivables on pure contingency since 2004, working unpaid invoices for finance teams across the country — from subscription and SaaS balances to trade, freight, contracting, healthcare and professional-services receivables. Over two decades we have placed more than \$975M in receivables, recovered over \$76M for clients, and worked 800,000+ accounts, with nationwide reach across all 50 states from 12 offices in 7 states. The model is simple: pure contingency, with no upfront fee, no retainer and no minimum — no recovery, no fee — backed by a documented, Reg F-compliant process, ACA International membership, and a clean compliance record since 2004.

See what AI-powered, compliant recovery does for your book.

Send a sample placement file and we will show you how Aktos prioritizes, contacts, and recovers your accounts — on pure contingency, with no upfront fee.
